

Fabrication Services & Beyond

Introduction

ABJ Engineering & Contracting Co, an ISO 9001 company based in Kuwait, serves the fabrication needs of oil and gas installations, petrochemical, fertilizer, power and desalination plants, etc, in the heavy industrial sector. It manufactures process equipment

such as pressure vessels, pressure piping, tanks, skids, and evaporators. In the public utilities sector, ABJ undertakes structural fabrication projects for stadiums, malls and amusement parks.

ABJ is certified by international standard institutions such as ISO and ASME, and is entitled to impress its products with the U, U2, PP, S, NB and R stamps. It has a reputation for consistent high quality work, precise on-time delivery and moderate pricing policies, without compromising on the health and safety of its manpower and the environment.

ABJ's began reaching out to potential customers overseas only a short time ago and has already supplied products and services to prestigious projects in Saudi Arabia, Russia, South Africa, Spain, and Iraq. To meet new global challenges, it has carried out major investment programmes and has built a modern manufacturing facility in a prime industrial zone in Kuwait.

Mina Abdulla Facility

Products and Services

ABJ supplies four main categories of products and services.

1) Process Equipment and Skids:

ABJ fabricates a variety of process equipment used in the oil and gas industry and in petrochemical, chemical, fertilizer, desalination and power plants, such as pressure vessels, surge vessels, LPG storage vessels, separators, de-salters, skids, reactors, RO skids, and storage tanks, among other equipment.

2) Structural Steel Design and Fabrication:

ABJ is one of the leading designers and fabricators of steel structures for the oil and gas sector and heavy industry, as well as for public utility projects such as stadiums, malls and amusement parks. It has undertaken large projects in the Middle East and South Africa.

3) Pipe Fabrication and Cladding:

ABJ fabricates steel pipes of various sizes for the oil and gas industry. It also undertakes the bore cladding, using exotic metals, of pipes and nozzles of all sizes. ABJ combines cutting-edge technology with management control systems and especially developed database programs.

4) Corrosion Protection Services:

ABJ provides one of the best corrosion protection services in the region. It undertakes corrosion protection contracts for industrial plants and oil and gas projects. ABJ has the sophisticated equipment and trained manpower needed to render lining and coating services for various applications.

Resources

ABJ is a well-capitalized organization which has invested heavily in advanced technology, new infrastructure and its human resources. It has 1200 well-trained technically-qualified personnel who are capable of successfully executing challenging projects both regionally and in international markets.

ABJ has two large manufacturing plants in Kuwait. Its Shuaiba facility is situated on a 30,000sq m area that is very close to the major refineries, petrochemical and fertilizer plants in the Shuaiba Industrial Area and near the major highways leading to Saudi Arabia and Iraq.

The second facility at Mina Abdullah Industrial Zone is located on an area of 150,000sq m. This newly-established unit caters to the large strategic industrial development projects currently being undertaken in Kuwait and neighbouring Gulf countries. It is equipped with sophisticated CNC machines, a PWHT Furnace, profile cutting machines, surface preparation and painting facilities, and enclosed vaults for 24-hour radiography work.

Shuaiba Facility

ABJ Engineering & Contracting Company recognizes that, to be successful, a modern business requires a solid foundation of sophisticated plant and equipment directed by well-managed process and control systems. ABJ has invested heavily in advanced machinery and it operates and maintains an integrated QHSE management system based on international standards. Its quality management system is ISO 9001 – 2000 certified
